

Why We Exist

Apraava Energy believes in doing business sustainably, to the exacting needs of our customers, and in the interests of all our stakeholders. We put energy in action by contributing to a holistic future.

Apraava Energy supports India's ambitions of providing clean and sustainable energy to all in the development of a low-carbon nation. Currently, we are working towards doubling our clean energy portfolio by 2024. We are exploring diversification into power distribution and other customer-focused energy businesses. Moreover, as an organization, we have announced a formal commitment to the Science Based Targets Initiative (SBTi).

Undeniably, how energy is generated, transmitted, distributed and consumed, will have significant ramifications on the environment as well as the global economy. Mindful of our role in the energy ecosystem, Apraava Energy aims to become the leading renewable power generator in the country over the next five years, alongside taking strides in transmission and distribution as well.

As an organization, we have pledged to positively impact 2 million lives by 2025 through our community investments. We will establish a common and coherent approach and facilitate the efficient deployment of company resources to contribute to the development of the communities in which we serve.

Climate action needs to be led by pioneering organizations, and Apraava Energy intends to be one by continuing to help create a future that will accelerate India's clean and green vision. We are committed to keep building a legacy that our future generations will cherish and nurture.
