

With the amalgamation of different elements, Apraava Energy creates a holistic, positive impact on people and society. As the winds change and we soar higher, Apraava Energy is rooted in making a difference in the socio-economic development of communities. We believe in engaging in development initiatives in the communities we serve so that every child, young person, and adult has a reason to believe in the prospect of a better future.

In order to achieve this development vision, Apraava Energy has undertaken several engagement activities and partnerships that benefit the community. We aim to establish a positive footprint in society by building infrastructure for the inclusion and empowerment of communities.

We are further focusing on educating women and children and the underprivileged by providing appropriate skills, training, and infrastructure. Basic nutrition and healthcare are at the top of our priority list. Employee participation and involvement make these activities more impactful.

Our key focus areas include education and training, making it possible for rural communities to make informed decisions. Providing quality education with specific skills and training to the women and children of the community is aimed at empowering them. Apraava Energy also works towards building a sustainable community by increasing access to healthy food, offering opportunities for physical activity, and sustainable environmental initiatives

In some of Apraava Energy's remote locations, the healthcare system is often inaccessible and adequate only to handle very basic health concerns. As a part of our community-building efforts, we provide mobile medical facilities, improve sanitation conditions, facilitate enrolment to the social security schemes, as well as provide funding for employable skills training for local community members.

Apraava Energy will continue efforts to impact touching millions of lives with several such CSR initiatives. In line with our 5-year community investment roadmap, by the end of 2025, we aim to make a difference to touch and impact 2 million lives.
